Mitigation Block

Like a breaker, but without the sweep.

Ink.

Bullish mitigation block

No new low

Price fails to make a lower low, then closes above the last high.

The last up candle into that high becomes the mitigation block.

Breaker or mitigation?

1

Breaker

The old low was swept before the break.

2

Mitigation block

It was not. A higher low formed instead.

3

Strength

Breakers are usually stronger: stops were taken first.

4

Trade it the same

Entry on the return, stop below the low.
