Propulsion Block

A candle that bounced off an OB and becomes the next launch pad.

Ink.

Built on top of an OB

Propulsion

The down candle that tapped the OB becomes a zone of its own.

On the next pull-back, price only needs to reach it, not the OB below.

Using it

1

Find the tap

The candle that traded into the OB.

2

Next pull-back

Expect support at its 50%, above the OB.

3

Shallower entry

Smaller pull-backs in strong trends.

4

Stop

Below the propulsion candle's low.
